

B+W Rubber Lens Hood 1

B+W Metal Lens Hood 3

B+W Aluminum Tele Hood 5

B+W Rubber Tele Hood 6

B+W Wide-angle Rubber Lens Hood 2

B+W Metal Wide-Angle Hood 4

Lens hoods guard against uncontrolled, stray light and unwanted reflections which result in reduced contrast and possible "ghost images". In general, the use of a lens hood is recommended because better contrast improves the appearance of the photograph. This accessory also offers protection for the front lens element against rain and mechanical damage.

**1 B+W Rubber Lens Hood** (Order No. 900)

This is made out of a high-quality matte black rubber. It folds down and protects against contrast-reducing, uncontrolled, stray light. It is available in screw-in, slip-on, and bayonet and is suitable for video cameras.

**2 B+W Wide-Angle Rubber Lens Hood** (Order No. 920)

This is made from high-quality black rubber for lenses with an angle of view wider than 70 degrees. Due to its shape and size, it prevents vignetting and should only be used without a filter.

**3 B+W Metal Lens Hood** (Order No. 950)

This is made of black anodized aluminium. It is suitable for lenses of standard focal lengths.

**4 B+W Wide Angle Metal Hood** (Order No. 970)

Features the same as the wide-angle folding hood but made of black anodized aluminium.

**5 B+W Alum. Telephoto Hood** (Order No. 960)

Due to the cylindrical shape and non-reflecting matte black baffles on the inside, this hood is especially suited for telephoto lenses.

**6 B+W Rubber Telephoto Hood** (Order No. 930)

Features the same as the aluminum telephoto hood but made of matte black rubber and is, therefore, collapsible.
